

## CHAPTER V

### CONCLUSION

In written language, words are arranged into phrases, clauses, and sentences. They are not just haphazardly arranged, but they relate to each other and they depend on each other. In this research the researcher studies about dependency relation. The study of the dependency relation of words deals with the arrangement of words, in which arrows traditionally show the relations of the head and the dependent words.

The research is entitled *A Study on Syntagmatic Relations of English Simple Sentence Constituents in Arthur Miller's Death of A Salesman* is intended to solve the problems of the study. The problems are how the constituents of English simple sentence in Arthur Miller's *Death of A Salesman* are interrelated in terms of dependency relation syntagmatically, and the grammatical functions of the constituents of English simple sentences in Arthur Miller's *Death of A Salesman*. Furthermore, the objectives of the show the syntagmatic interrelation of the constituents of English simple sentences in Arthur Miller's *Death of A Salesman* in terms of dependency relation, and to describe the grammatical functions of those constituents.

The researcher uses a descriptive method. The researcher collects the data, classifies the data, makes the analysis, and then she concludes the analysis. The researcher has 40 data and she analyzes all of them. In technique of data collection, the researcher uses five steps to collect the data. They are reading the

drama several times, choosing some simple sentences from the drama, making the list of the simple sentence, classifying the data based on the characteristics, coding the data from the list of data, and then rechecking the chosen data, in the case that the data are appropriate enough or not.

The analysis of the dependency relation is classified into 5 categories that are a verb controlling a noun or pronoun, a verb controlling a preposition, a noun controlling the article, a noun controlling a preposition, and a preposition controlling a noun. The next analysis is about the grammatical relations of controllers and dependents that are predicate as the controller, subject as the dependent, and object as the dependent.

By analyzing the simple sentences, the researcher shows the relation of the constituents and the relation of the grammatical functions in simple sentences. The analysis shows that an English simple sentence is not as simple as it looks like. They also need to be arranged correctly to be understood well so that we can get the message of the sentence correctly.
